

Mark schemes

- 1** (a) (If any factor is changed which affects an equilibrium), the (position of) equilibrium will shift / move so as to oppose / counteract the change.

Must refer to equilibrium

Ignore reference to "system" alone

A variety of wording will be seen here and the key part is the last phrase

OR

(When a system / reaction in equilibrium is disturbed), the (position of) equilibrium shifts / moves in a direction which tends to reduce the disturbance

An alternative to shift / move would be the idea of changing / altering the position of equilibrium

1

- (b) (i) M1
A substance that speeds up the reaction / alters the rate but is chemically unchanged at the end / not used up

Both ideas needed for M1

Credit can score for M1, M2 and M3 from anywhere within the answer

M2

Catalysts provide an alternative route / alternative pathway / different mechanism

M3

that has a lower activation energy / E_a

OR

lowers the activation energy / E_a

3

- (ii) (Time is) less / shorter / decreases / reduces
Credit "faster", "speeds up", "quicker" or words to this effect

1

- (iii) None

1

- (c) (i) R

1

- (ii) T

1

- (iii) R

1

- (iv) P

1

2

(a) **Award in either order for curve***“Steeper” requires line to be on the left of the original line, starting from the origin***M1** curve is steeper than original and starts at the origin**M2** curve levels at the top line on the graph

2

(b) **Award in either order for curve***“Shallower” requires line to be on the right of the original line, starting from the origin***M1** curve is shallower than original and starts at the origin**M2** curve levels at the first line on the graph

2

(c) **M1** curve would be steeper than original*“Steeper” requires line to be on the left of the original line, starting from the origin***M2** curve levels at the same original volume of O₂

2

(d) **M1** The (concentration / amount of) H₂O₂ or reactant falls / decreases / used up
*Mark independently***OR**The number of H₂O₂ or reactant molecules/ particles falls / decreases**M2**The rate of reaction / rate of decomposition / rate of formation of oxygen / frequency of collisions / (effective) collisions in a given time decreases / is slower

2

(e) (i) **2H₂O₂ → 2H₂O + O₂***Ignore state symbols**Accept only this equation or its multiples**Extra species must be crossed through*

1

(ii) hydrogen bromide / it does not appear in the overall equation

OR

hydrogen bromide / it is not used up in the reaction / unchanged at the end of the reaction

OR

hydrogen bromide / it is regenerated / re-formed (in Step 2)

1

[10]

3

(a) $q = 500 \times 4.18 \times 40$

Do not penalise precision.

1

$= 83600 \text{ J}$

Accept this answer only.

Ignore conversion to 83.6 kJ if 83600 J shown.

Unit not required but penalise if wrong unit given.

Ignore the sign of the heat change.

An answer of 83.6 with no working scores one mark only.

An answer of 83600 with no working scores both marks.

1

(b) Moles ($= 83.6 / 51.2$) = 1.63

Using 77400 alternative gives 1.51 mol

Allow (a) in kJ / 51.2

Do not penalise precision.

1

Mass = $1.63 \times 40(.0) = 65.2 \text{ (g)}$

Allow 65.3 (g)

Using 77400 alternative gives 60.4 to 60.5

Allow consequential answer on M1.

1 mark for M_r (shown, not implied) and 1 for calculation.

Do not penalise precision.

2

(c) Molarity = $1.63 / 0.500 = 3.26 \text{ mol dm}^{-3}$

Allow (b) $M1 \times 2$

Using 1.51 gives 3.02

1

(d) Container splitting and releasing irritant / corrosive chemicals
*Must have reference to both aspects; splitting or leaking (can be implied such as contact with body / hands) **and** hazardous chemicals.*
Allow 'burns skin / hands' as covering both points
Ignore any reference to 'harmful'.
Do not allow 'toxic'.

1

(e) (i) $4\text{Fe} + 3\text{O}_2 \rightarrow 2\text{Fe}_2\text{O}_3$
Allow fractions / multiples in equation.
Ignore state symbols.

1

(ii) Iron powder particle size could be increased / surface area lessened
Decrease in particle size, chemical error = 0 / 3
Change in oxygen, chemical error = 0 / 3

1

Not all the iron reacts / less reaction / not all energy released / slower release of energy / lower rate of reaction

Mark points M2 and M3 independently.

1

Correct consequence of M2

- An appropriate consequence, for example*
- *too slow to warm the pouch effectively*
 - *lower temperature reached*
 - *waste of materials*

1

(f) (i) Conserves resources / fewer disposal problems / less use of landfill / fewer waste products

Must give a specific point.

Do not allow 'does not need to be thrown away' without qualification.

Do not accept 'no waste'.

1

(ii) Heat to / or above 80 °C (to allow thiosulfate to redissolve)

Accept 'heat in boiling water'.

If steps are transposed, max 1 mark.

1

Allow to cool before using again

Reference to crystallisation here loses this mark.

1

[14]

4

- (a) Number / proportion / percentage / fraction of molecules

Ignore "particles"

1

- (b) None **OR** no effect **OR** no change

1

- (c) **X**

1

- (d) **Answers in either order**

M1 collision **OR** collide

Mark independently

M2 collision / molecules / particles

Ignore "correct" amount of energy

with the activation energy

OR with $E \geq E_{act}$

OR with sufficient /enough energy

OR with the minimum energy

OR with the correct orientation

2

- (e) A small increase in temperature results in many more / much higher proportion of / a lot more / significantly more molecules / particles / collisions with $E \geq E_{act}$ / energy greater than the activation energy / sufficient energy / enough energy / minimum energy to react

(compared with a small increase in concentration)

Not just "more molecules with $E \geq E_{act}$ "

*The answer must convey that the increase is **significant***

Accept reference to "atoms", "molecules", "particles"

Ignore "species"

1

[6]

5

- (a) **M1** The activation energy is the minimum / least / lowest energy

Mark independently

Ignore "heat" and ignore "enthalpy"

M2 (energy) for a reaction to occur / to go / to start

OR (energy) for a successful / effective collision

Ignore "breaking the bonds"

2

- (b) **M1** Catalysts provide an alternative route OR an alternative mechanism OR alternative / different path(way)
- M2** Lowers the activation energy
Mark independently
Ignore reference to "surface" 2
- (c) (i) Stay(s) the same 1
- (ii) Increases
Credit "increase" or "increased" 1
- (iii) Increases
Credit "increase" or "increased" 1
- (iv) Stay(s) the same 1
- (d) (i) **M1** yeast or zymase
- M2** ethanol
Ignore "enzyme"
In M2, ignore "alcohol" and ignore any formula 2
- (ii) **M1** (Concentrated) H_3PO_4 OR (Concentrated) H_2SO_4
- M2** butan-2-ol
Credit correct names
Ignore "hydrogenphosphate or hydrogensulfate"
Ignore "dilute" or "aq"
Do not penalise absence of hyphens in name.
In M2, ignore any formula 2

[12]

6

(a) (i) **M1** The peak of the new curve is displaced to the right.

M2 All of the following are required

- The new curve starts at the origin
- The peak of the new curve is lower than the original
- and the new curve only crosses the original curve once
- and an attempt has been made to draw the new curve correctly towards the energy axis but not to touch the original curve
- the new curve must not start to diverge from the original curve

M1 is low demand

M2 is higher demand.

2

(ii) **M1** Increase in the number/proportion of molecules with $E \geq E_a$

OR more molecules have $E \geq E_a$

OR more molecules have sufficient energy to react

M2 More effective/productive/successful collisions

Ignore "molecules have more energy"

Ignore "more energetic collisions"

Ignore "molecules gain activation energy"

Ignore "more collisions"

Accept "particles" for "molecules" but NOT "atoms"

Ignore "chance of collision"; this alone does not gain M2

2

(b) (i) Iron **OR** Fe

1

(ii) **M1** Catalysts provide an alternative route/pathway/mechanism

OR

(in this case) surface adsorption/surface reaction occurs.

For M1, not simply "provides a surface" alone

M2 that has a lower activation energy

OR

lowers the activation energy

For M2, the candidate may use a definition of activation energy without referring to the term

2

[7]

7

(a) (i) **M1** drawn curve starts at reactants and ends at products

Tapered lines into the original curve gain credit for M1

M2 curve peak is below the one drawn in the question

(and may show one/two humps)

Mark M1 and M2 independently

2

(ii) Exothermic (reaction)

Ignore "ΔH is negative"

1

(iii) Σ bond (enthalpy) reactants < Σ bond (enthalpy) products

The sum for H₂ and I₂/reactants is less than/lower than/smaller than the sum for 2HI/products

OR

The sum for 2HI/products is more than/larger than/bigger than the sum for H₂ and I₂/reactants

Accept "It OR the sum will be smaller or less"

1

(iv) **M1** p

2

M2 $-(q - p)$

OR

$p - q$

OR

$-q + p$

M2 demands that the sign for an exothermic reaction is part of the outcome mathematically.

Ignore case

(b) (i) Increase/speed up/faster (rate of attainment of equilibrium)

OR

Increase/speed up/faster rate of both forward and reverse reaction

OR

Increase/speed up/faster rate of reaction

Credit "It took less time"

1

(ii) **M1** Increase/speed up/faster (rate of attainment of equilibrium)

M2 More particles/molecules in a given volume/space

OR the particles/molecules are closer together

OR an increase in concentration.

M3 More/higher chance of successful/effective/productive collisions (between particles)

OR more collisions/higher chance of collisions (of particles) with $E > E_{\text{Act}}$

If M1 is blank, mark on and credit M1 in the text

If M1 is given as “decrease”/“no effect”/“no change” then CE = 0 for clip

In M1, if increase both the forward and reverse reaction, but no mention of rate, penalise M1 but mark on.

In M1, if increase either forward rate or reverse rate only, then penalise M1 but mark on.

Penalise M3 if an increase in the value of E_{Act} /energy of particles is stated.

Max 1 for M2 and M3 if reference to “atoms”

3

[10]

8

Measure volume of gas / mass loss

If ‘measure concentration’ must explain how to score mark

1

At (regular) time intervals

Ignore references to temperature

Accept ‘against time’

Do not accept ‘with time’ or ‘over time’ on its own

1

[2]

9

(a) Antacid

OR

to neutralise acidity

OR

eases indigestion

Credit suitable reference to indigestion or to laxative or to relief of constipation

1

(b) **M1** Decrease in T decreases the energy of the particles/ions/H⁺/molecules

M2 (also scores M1) Decrease in the number of/less particles/ions/
H⁺/molecules with $E \geq E_{\text{Act}}$ or $E \geq$ minimum energy to react

*In M1 and M2, credit "atoms" but ignore "calcium carbonate", ignore
"calcium", ignore any ion formula except H⁺*

M3 Few(er)/Less effective/productive/successful collisions

QoL

3

(c) (i) Strontium has a higher melting point than barium, because

Correct reference to size of cations/proximity of electrons

M1 (For Sr) delocalised electrons closer to cations/positive
ions/atoms/nucleus

OR

cations/positive ions/atoms are smaller

OR

cation/positive ion/atom or it has fewer (electron) shells/levels

Ignore general Group 2 statements

*Penalise M1 if Sr or Ba is said to have more or less delocalised
electrons*

Ignore reference to shielding

CE = 0 for reference to molecules or intermolecular forces or
covalent bonds

Relative strength of metallic bonding

M2 (Sr) has stronger attraction between the cations/positive ions/
atoms/nucleus and the delocalised electrons

OR

stronger metallic bonding

(assume argument refers to Sr but accept converse argument for Ba) 2

*Ignore "Van der Waals forces (between atoms)" but penalise if
"between molecules"*

(ii) $\text{Sr} + 2\text{H}_2\text{O} \rightarrow \text{Sr}(\text{OH})_2 + \text{H}_2$

Or multiples

1

Or multiples

1

[9]

10

(a) (i) Oxidation

OR

Oxidised ONLY

1

(ii) Any one from

- to provide/overcome activation energy
- to provide the minimum energy to make the reaction go/start
NOT simply to increase the (initial) reaction rate.

1

(iii) The reaction is exothermic OR releases heat (energy)

1

(iv) M1

Catalysts provide an alternative route/pathway OR an alternative mechanism

OR

(in this case) surface adsorption occurs (or a description of adsorption)

Ignore reference to "surface" alone

M2

Lowers the activation energy

OR

of lower activation energy

2

- (b) M1
The (forward) reaction is exothermic OR the (forward) reaction releases heat

OR

The reverse reaction is endothermic or absorbs heat

M2 – Direction of change N.B. M2 depends on correct M1

At lower temperatures,

- the equilibrium yield of NO_2 is greater
- more NO_2 is formed
- equilibrium shifts (left) to right
- (equilibrium) favours the forward reaction

(**OR** converse for higher temperatures)

2

- (c) NO_2 (+) 4

NO_3^- (+) 5

HNO_2 (+) 3

3

[10]

11

- (a) Sulfur OR S OR S_8
Sulphur

1

- (b) **M1** The activation energy is the minimum / least / lowest
Mark these independently

1

M2 Energy for a reaction to occur / to go / to start
OR
Energy for a successful / effective collision

1

- (c) Explanation:
M1 Twice as many / double number of particles
M1 NOT molecules 1
- M2** More / twice / double (effective) collisions (in a given time)
OR
Double / greater / increased collision frequency 1
- (d) (i) (Measured) change in concentration (of a substance) in unit time
/ given time
May be written mathematically
OR the gradient of the concentration (against) time 1
- (ii) The measured change / amount (of precipitate) / cloudiness is
fixed or constant or unchanged 1

[7]

12

- (a) Temperature / pressure;
Do not allow 'amount' or concentration of reactants. 1
- (b) Determine gradient;
Do not allow volume / time.
Accept 'steepness' or 'slope' 1

[2]

13

- (a) Peak lower 1
and moved to right 1
start at the origin and curve crosses once only 1
- (b) (i) (Rate of reaction) increases 1
- (At a higher temperature) more molecules/particles 1
- have the minimum energy needed to react/have activation
energy/have successful collisions
Mark CE if incorrect effect given 1

- (ii) (Rate of reaction) increases 1
lowers activation energy 1
so that more molecules are able to react 1
Mark CE if incorrect effect given

[9]

14

(a) Equation $1/2\text{N}_2 + 3/2\text{H}_2 \rightarrow \text{NH}_3$ 1

$$\Delta H_f = [(945 \times 0.5) + (426 \times 1.5)] - (391 \times 3) \quad 1$$

$$= -46.5 \text{ kJ mol}^{-1} \quad 1$$

<p>Mark Range</p>	<p>The marking scheme for this part of the question includes an overall assessment for the Quality of Written Communication (QWC). There are no discrete marks for the assessment of QWC but the candidates' QWC in this answer will be one of the criteria used to assign a level and award the marks for this part of the question</p> <p style="text-align: center;">Descriptor</p> <p style="text-align: center;">an answer will be expected to meet most of the criteria in the level descriptor</p>
<p>4-5</p>	<ul style="list-style-type: none"> – claims supported by an appropriate range of evidence – good use of information or ideas about chemistry, going beyond those given in the question – argument well structured with minimal repetition or irrelevant points – accurate and clear expression of ideas with only minor errors of grammar, punctuation and spelling
<p>2-3</p>	<ul style="list-style-type: none"> – claims partially supported by evidence – good use of information or ideas about chemistry given in the question but limited beyond this – the argument shows some attempt at structure – the ideas are expressed with reasonable clarity but with a few errors of grammar, punctuation and spelling
<p>0-1</p>	<ul style="list-style-type: none"> – valid points but not clearly linked to an argument structure – limited use of information or ideas about chemistry – unstructured – errors in spelling, punctuation and grammar or lack of fluency

(b) The higher the temperature the faster the reaction QWC 1

but, since the reaction is exothermic 1

the equilibrium yield is lower QWC 1

The higher the pressure the greater the equilibrium yield QWC 1

because there is a reduction in the number of moles of gas
in the reaction 1

but higher pressure is expensive to produce or plant is more
expensive to build QWC 1

A better catalyst would lessen the time to reach equilibrium 1

and allow more ammonia to be produced in a given time QWC 1

[11]
